

Group 4 Team Information and Contract

1.1 Team Name: hustle

1.2 Our strength is that each of our members has real-world experience in IT, solution consulting, supply chain and software development. Combined, our experience gives our team a strong foundation of knowledge and the efficiency needed to get the job done.

1.3 Team Member Biographies

Member 1: Michael Kuo - MAIN CONTACT

Michael is a senior Computer Science student at Georgia State University and has over seven years of professional experience in operations and solution engineering. Currently working at Jen & Co Wholesale in Atlanta, GA, Michael has led warehouse management system (WMS) development, ERP integrations, and warehouse automation initiatives involving PLCs, AMRs, and AGVs. His technical toolkit includes Python, SQL, JavaScript, Oracle, NetSuite, API, and Celigo iPaaS. Michael's unique combination of hands-on engineering experience and academic rigor makes him an exceptionally effective collaborator and communicator on technically complex projects.

Member 2: Teamir Teshome

Teamir is a senior Computer Science student at Georgia State University, set to begin his Master's in Computer Science at the University of Georgia this fall. At 20, he has accumulated relevant industry experience across two internships. He started at ATOM Advantage, a firm specializing in document processing and metadata extraction for healthcare and insurance clients, and is currently interning as a Software Engineer at Cargill, the world's largest privately held company and a global leader in agricultural supply chain and commodities. He brings a combination of academic rigor and hands-on engineering experience to every role he takes on.

Member 3: Amanda Baker

Amanda Baker is a full stack Software Engineer at a healthcare startup, where she works full-time developing patient-focused healthcare technology solutions. In her role, she contributes to the design and development of scalable applications, helping improve healthcare accessibility, patient data management, and overall user experience.

Alongside her professional experience, Amanda has built a strong technical foundation through hands-on work with modern technologies including React, TypeScript, Node.js, NestJS, PostgreSQL, Docker, and cloud-based services. She brings a combination of real-world engineering experience, problem-solving skills, and a passion for building impactful software that improves people's lives.

Member 4: Amon

Amon builds tools to provide North Koreans access to outside information. Before finishing school, he worked in startups as a software engineer. He is now completing his computer science degree, after which he will pursue a masters at Georgia State University where he will spend 2 years studying and publishing on North Korean state-backed hacking organizations.

1.4 First virtual meeting photo:

* Kwai is Michael's user name on discord

*Amon Garner-Poston did not show up for the meeting.

1.5 Team agreement and guidelines:

- Discord will be the main platform for all communication, including but not limited to (meeting, workshop, project, discussion, update... etc)
- Attendance is not required for meetings as long as the team members have completed their assigned work. However, members are required to attend meetings if the team lead requests it.
- Group members are expected to respond to messages as soon as they read them. While enabling notifications is not required, all members should check the communication channel regularly.
- An agenda will be posted to the group chat or shared document at least 12 hours before each meeting, and all members are expected to review the agenda and any linked materials before the meeting begins.
- It is not mandatory to prepare questions before the meeting, but all members should come prepared with progress updates for their assigned items.
- All code and collaborative documents will be managed in a shared GitHub repository. All work is done on feature branches named feature/short-description or fix/short-description. Branches are merged via Pull Request only.
- All members should commit source code, configuration files, documentation, test files, and README updates.
- All members should **NOT** commit any API keys, passwords, IDE-specific folders, or large binary assets.
- All deliverables must be completed and reviewed at least **48 hours before the deadline**
- Action items assigned to the absent member will remain their responsibility and are due on the same timeline as the rest of the team.
- The team will continue dividing upcoming work in the absent member's absence. A summary of their next assigned tasks will be sent to them via the discord.
- Late submissions require all members to agree to the delay and notify the instructor. No member may unilaterally hold back a submission.
- Any member who is absent from a meeting will receive a formal warning before the instructor is notified. The non-contributing member will receive a deduction of **60-80%** from the group assignment grade for that submission, and the remaining members will not have their grades penalized due to one member's non-contribution.

- Late submissions are not allowed. Group members should plan ahead for any anticipated work.
- In case of emergency, notify the instructor immediately.
- The team lead reserves the right to modify any of the guidelines and agreements at any time.

1.6 Dividing work

- Every member will contribute to coding, testing, documentation, and review at different points in the project.
- Tasks will be assigned at the start of each sprint/phase.
- Each member's contributions will be visible via GitHub commit history, code reviews, and meeting logs, providing an objective record.
- **The team agreed to the following definition of a non-contributing member:** Failure to complete any assigned tasks on time across consecutive checkpoints, zero meaningful GitHub commits during a project phase, or being unresponsive to any team communication.
- The team lead reserves the right to modify any of the guidelines and agreements at any time.
